**OMi** Crane Systems, Inc.

# ENGINEERED PRODUCTS

## UNDERHUNG — SINGLE GIRDER

Capacities to 10 tons,  
Spans to 75 feet

## TOP RUNNING — DOUBLE GIRDER

Capacities to 100 tons,  
Spans to 120 feet

## SPECIAL HEAVY DUTY, OPEN DECK, BUILT-UP HOIST MACHINERY

## TOP RUNNING — SINGLE GIRDER

Capacities to 10 tons,  
Spans to 75 feet

OMI Cranes are engineered to meet your particular lifting tasks. Every detail is studied by OMI's experienced staff of engineers and technicians. From the moment your order is received, you are assured by OMI's twenty years of experience serving the crane industry that your equipment will be designed and engineered to meet and even exceed specifications. From our plant in Dallas, Texas, we provide total manufacturing control from engineering through fabrication.

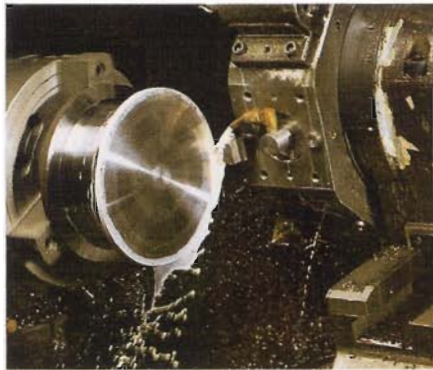

# ENGINEERING MANUFACTURING FABRICATION

OMI designed a custom Autocad computer program to make sure each crane meets or exceeds CMAA and Industry standards for service classifications "A" through "E".

And, OMI designed a computer program that runs a precision lathe to cut axles, bearing housings, under-running wheels and top running wheels.

In the fabrication and final assembly areas, experienced craftsman fit and assemble each crane and tests that can be run under no load conditions are performed.

Computerization . . . Automation . . . Dedication to personal service, these are the quality marks that set OMI apart. By providing this total capability, we are able to optimize designs for maximum performance and reliability at minimum cost.

COMPUTER CONTROLLED LATHE

AUTOCAD ENGINEERING

FABRICATION & FINAL ASSEMBLY

OMI offers complete turn-key installations including runways and structural support systems. Our factory service team is available for support, technical assistance, and routine maintenance. And, standard components are stocked in-house so that replacement parts are only a phone call away. For more information, call OMI for the sales representative in your area.
